FPGA & Embedded Systems · Power & Grid Systems · Energy Systems Optimization · EV Charging · Sustainability Management

PROFILE

Electrical and electronics engineer with hands-on experience across FPGA vision systems for UAVs and UGVs (HAVELSAN), grid control software (Siemens), medium voltage switchgear (Eaton) and EV power distribution (Bozankaya). Completing an M.Sc. in Sustainability Management at RWTH Aachen with a grade of **1.8**. Master's thesis at the E.ON Energy Research Center optimizes commercial EV charging under different tariff designs and bidirectional flexibility, using MILP and rolling horizon scheduling.

EDUCATION

RWTH Aachen University

Oct 2024 to Apr 2027 (expected)

M.Sc. Sustainability Management · Taught in English · Grade 1.8 (German scale) — Aachen, Germany

- Top grades: Sustainability Analytics (**1.0**), Strategy and Sustainability (**1.3**), Earth System Science (**1.3**)
- Thesis: *Optimising Commercial Electric Vehicle Load Profiles through Tariff Design and Bidirectional Flexibility*

TOBB University of Economics and Technology

Sep 2018 to Apr 2024

B.Sc. Electrical and Electronics Engineering · Specialization in Embedded Systems — Ankara, Turkey

- Bachelor's thesis: real time 360° FPGA video stitching system, built with HAVELSAN

EXPERIENCE

E.ON Energy Research Center, RWTH Aachen University

Aug 2025 to Present

Master's Thesis Student · Institute for Future Energy Consumer Needs and Behavior (FCN-ESE) — Aachen, Germany

- Building a mixed integer linear programming (**MILP**) model with a rolling horizon to schedule charging for commercial electric vehicle fleets.
- Assessing how tariff design and bidirectional flexibility reshape commercial EV load profiles within a Germany-wide framework.
- Built a citation map of the literature and a scoring system to rank candidate datasets, including JERICHO-E-usage (NUTS2 energy demand).

HAVELSAN

Dec 2023 to Jul 2024

Bachelor's Thesis Student, FPGA Vision Systems · SUIT Plus Program — Ankara, Turkey

- Designed and implemented a 360° panoramic surveillance camera with ultra low latency video stitching in Verilog and VHDL on FPGA, reaching processing speeds up to **30× faster** than conventional methods.
- Integrated the system on ZYNQ and PYNQ platforms for UAVs and UGVs, with an extended dome camera mode for UAVs.
- Designed the architecture for C++ and Python integration, using OpenCV for video processing (**GitHub**).

Siemens

Sep 2023 to Dec 2023

Software Engineering Intern · Grid Software Department — Ankara, Turkey

- Contributed to Spectrum Power 4 and 7, Siemens' power grid monitoring and control software.
- Managed station data in the Information Model Management (IMM) system: configuration, data integrity and XML imports and exports.
- Built **three automation tools** in JavaScript and Perl: a reporting tool for IMM data, a data manipulation tool that embeds structured data into IMM, and an auto station generator that cut manual station setup time.
- Onboarded new interns and part-time employees.

Eaton
May 2023 to Aug 2023

Power Systems Engineering Intern · Engineering Department — Ankara, Turkey

- Cut switchgear cable lead times from **6 to 12 months down to 1 to 2 weeks** by sourcing from local subcontractors in Turkey instead of Eaton's Netherlands facility.
- Configured XIRIA switchgear and produced single line and multi line schematics and 3D models in EPLAN P8 with Eaton's Hengelo (Netherlands) team.
- Benchmarked medium voltage switchgear (XIRIA, HMH, URING, UX, UMC) on arc quenching, circuit breakers and load break switches to support product development.
- Ran quality control on XIRIA production units, documented defects for engineering, and kept BOMs and technical files current in SAP.

Bozankaya
May 2021 to Aug 2021

Electrical and System Design Intern — Ankara, Turkey

- Contributed to schematic design and integration of power distribution systems for electric trams and buses in EPLAN P8 and AutoCAD, through to production readiness.
- Performed high voltage production tests and implemented the resulting design revisions.

LEADERSHIP AND ACTIVITIES

Aeron Team Aachen
Nov 2025 to Present

Co-Team Manager and Treasurer · Student VTOL UAV team — Aachen, Germany

- Developing flight control software for the team's foldable wing (Transwing) VTOL UAV across hover, transition and cruise.
- Head of strategy, marketing, sponsorship and finance: budget planning, income and expense tracking, and oversight of project funds.
- Leading the team's incorporation as a registered association (e.V.), from statutes to official registration.

United for Sustainability
Nov 2024 to Present

Developer · Student club — Aachen, Germany

- Designing and building the club's website to strengthen its online presence and member engagement.
- Organizing presentations and sustainability initiatives to grow membership.

TOBB ETU GO Team
Sep 2018 to Apr 2024

Member · Student electric vehicle team — Ankara, Turkey

- Developed a battery management system (BMS) in C, comparing implementation approaches for efficiency in electric vehicles.
- Researched electric motor designs, secured sponsorships and represented the team at trade fairs.

SKILLS AND LANGUAGES

Hardware and embedded	FPGA design (Verilog, VHDL), ZYNQ, PYNQ, C, C++
Programming and data	Python, MATLAB, OpenCV, JavaScript, Perl, HTML, Power BI, generative AI tools
Modeling and optimization	MILP, rolling horizon scheduling, AnyLogic 8 (simulation)
Electrical design	EPLAN P8, AutoCAD
Business tools	SAP, MAXQDA, Microsoft Office
Languages	Turkish (native) · English (C1) · German (B1)

Reference letters from Siemens, Eaton and Bozankaya available on request.
